

## **Stryker Communications Announces UK Launch**

On the 1st of February Stryker Communications Limited announced their launch into the UK Security Market.

Stryker's lead product is IRIS (Intelligent Remote Information System), an intelligent deployable surveillance system specifically designed for use in demanding operational environments. The IRIS system is complemented by a range of optional modules which provide automatic recognition, digital recording and video analysis capabilities.

Heading the launch of IRIS are Steve McCullen and David Oliver, both formerly of Petards Vision where they were responsible for introducing the UK's first purpose-built re-deployable wireless camera system for urban surveillance.

The IRIS system incorporates features designed to allow the camera system and related components to be readily updated and to enable compatibility and integration with other manufacturers' equipment, providing customers with a greater degree of "future proofing".

As specialists in the deployable surveillance arena, Stryker also provide a range of extended support offerings from initial field surveys through to maintenance and repair services, not only for their own cameras but also for other manufacturers' equipment.

A range of upgrade plans are also available to assist organisations wishing to migrate from their existing system to Stryker's new generation of deployable surveillance products.

Commenting on the launch, Steve McCullen says "Stryker's aim has been to develop a new generation of intelligent, deployable surveillance products which can satisfy the increasingly demanding needs of Central and Local Government, police and law enforcement agencies. We believe that these products, coupled with our ethos for providing excellent and attentive customer service, position Stryker as a strong contender in the mobile surveillance market".
