

IRIS Products

IRIS is a new generation of wireless video surveillance systems from Stryker Communications, designed for fast and effective CCTV deployment.

IRIS systems can typically be installed and operational within minutes and are suitable for either temporary or permanent use. A wide range of wireless transmission formats are supported from basic analogue (line-of-sight) through to advanced COFDM digital (non line-of-sight) and 3G transmission technology to suit varying deployment requirements.

The IRIS range includes a variety of interchangeable modules (PODs) that enable the equipment to be easily adapted to suit different operational needs including digital video recording, automatic number plate recognition and other video analysis applications.

IRIS systems can be configured for stand-alone operation or may be fully integrated into existing CCTV control room facilities. Compatibility with existing mobile and wireless CCTV surveillance systems is also supported.

IRIS I

IRIS I camera unit incorporating 360° colour/mono PTZ dome camera.
Available with analogue (licenced & unlicenced frequencies), digital OFDM and COFDM, Wi-Fi, wireless IP or GPRS/3G Transmission.

IRIS MIC1

IRIS camera unit incorporating Forward Vision MIC1-400 dome camera providing greater ruggedisation and resistance to vandalism.

IRIS Wi-Fi DVR POD

"Snap-on" module provides on-board digital video recording capability.

Camera & DVR functions accessible via Wi-Fi, GPRS or 3G

IRIS Camera with Wi-Fi DVR POD fitted

IRIS Control Case

Self-contained remote control unit providing full control of camera and ancillary equipment. Integral recording options include mini-DV, DVR and DVD recording. Standard and Peli case versions. Simultaneous 4-way video channel version also available.

IRIS Concealed DVR System

Self-contained "set and forget" recording system for both overt and covert surveillance applications.

Remotely accessible via Wi-Fi, GPRS or 3G.

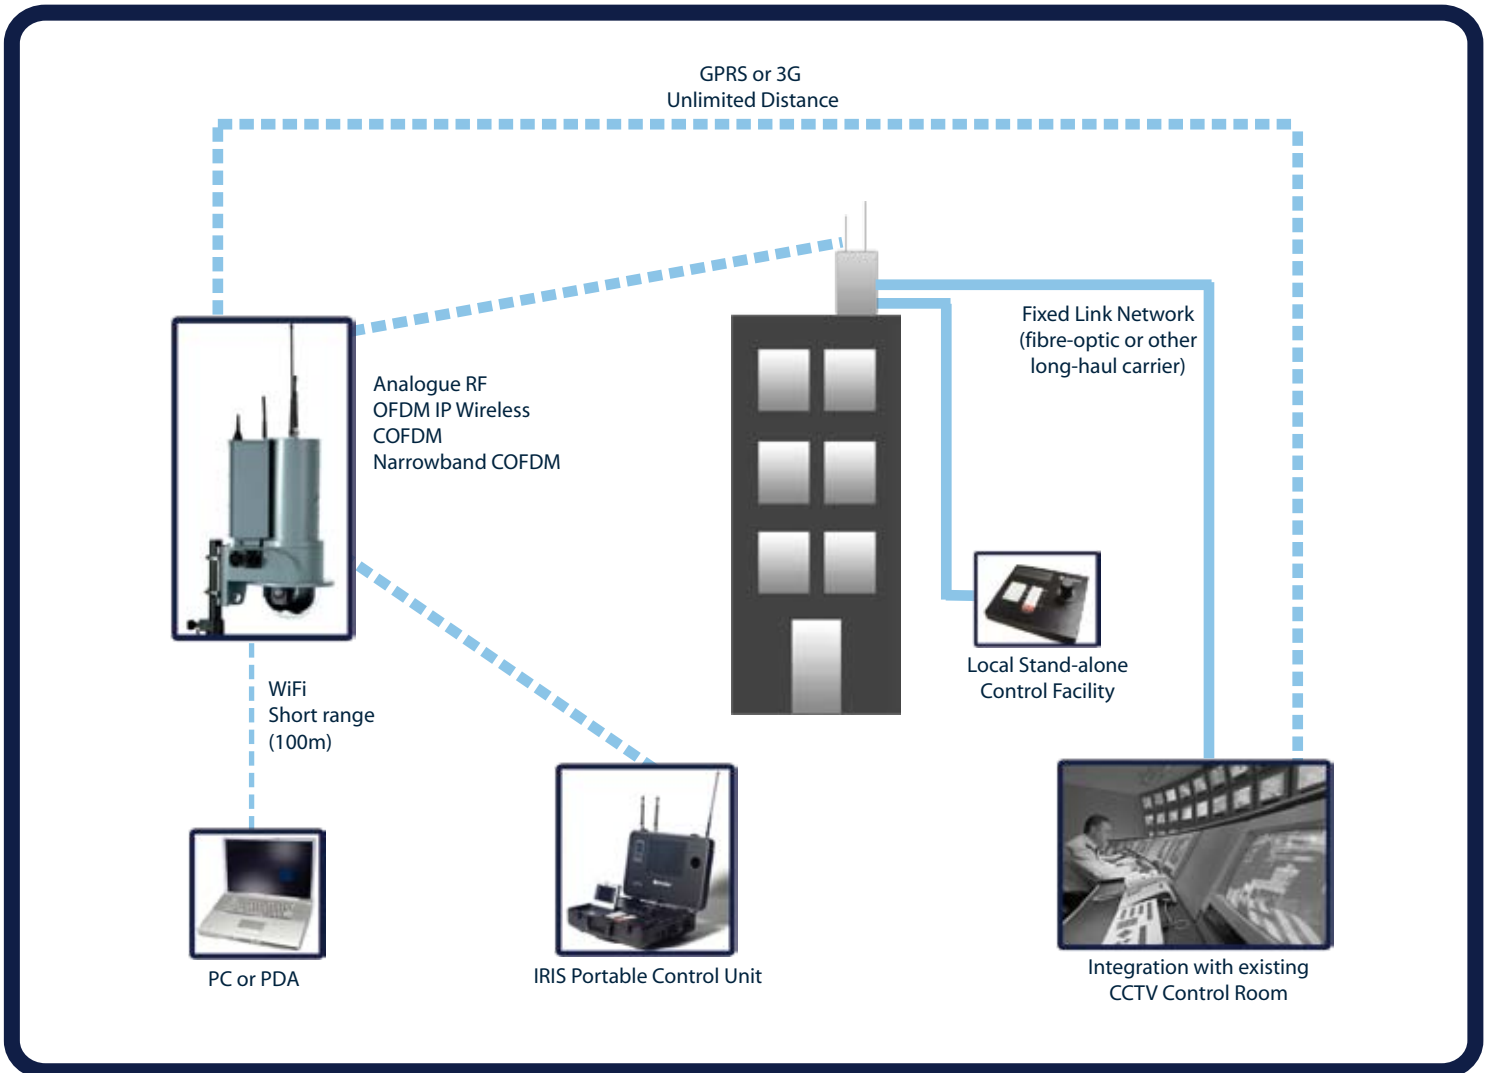

IRIS Keyboard

Desktop keyboard controller for IRIS camera systems.
